BRIGHTECH

The Linden Floor Lamp

ASSEMBLY

1. Feed the cord from the upper portion of the lamp (part E) through poles C and D.
2. Screw parts D, C, and B together.
3. Plug the cord coming out the bottom of pole B into the base (part A).
4. Screw the lamp body onto the base.
5. Plug the included power adapter cord (part G) into the cord of the lamp.
6. Plug the cord into a US outlet. Review reverse side of this page for important warnings and safety information prior to use.

OPERATION & USE

POWER & DIMMING : The power & dimming control is located on the top of the lamp's pole, in the form of a touch-sensor. Lightly tap to turn the lamp on at its brightest setting, and continue tapping to rotate through the brightness settings. The fourth tap turns the lamp off. Take care not to step on the button with too much force, as this can permanently damage the controls.

USING WITH A WALL SWITCH & SMART PLUGS : To use this lamp with a wall switch, simply plug it into an outlet that is built to be powered with the wall switch, and turn the lamp On via the power button. The lamp will then be able to be turned on and off via the light switch. To connect to a smart plug, plug the lamp into one and turn it on. The lamp will then be able to be turned on and off via the smart plug. However any adjustments to brightness will need to be controlled physically via the lamp's physical controls.

SAFETY & WARNIINGS

This product is intended for 120v voltage only. Use with a higher voltage is likely to cause damage to the product as well as the electrical component it is being powered by.

Do not bring this product or any of its components in contact with any water or extreme heat.

Keep between 23 degrees F & 104 degrees F, and below a humidity of 95%.

Do not use this product outside of its intended and advertised use. Do not tamper with internal parts or wiring.

Brightech is not responsible for any failures associated with modifications to this product or any of its electrical components, or when the product is used with externally purchased parts not manufactured to come with this product.

FURTHER RESOURCES | Diagnosis

Though all of our products pass rigorous pre-production quality control, we understand that sometimes things can happen. If your product is experiencing any abnormalities, please see below fo some more insight as to what may be happening & if there's anything you can do to troubleshoot. If the purchase is covered under warranty, notify us of any weaknesses or malfunctions as soon as they are discovered.
Note: Never make any temporary or permanent alterations to any parts or components of this product.

Physical or Cosmetic Damage: If the damaged portions of the product are among the separate pieces listed on the opposite side of this guide (see: Assembly), these pieces might be able to be replaced. However any parts that are connected to other parts by wiring are considered one full piece as a unit.

Replacing the Lights or Wiring: The LEDs and wiring are built directly into the lamp for maximum durability and are non-replaceable at this time.

Light Flashing or Strobing: A malfunction of this sort may suggest a problem with the power adapter, necessitating a replacement of this cord piece.

Lights are Dim: If the LEDs have dimmed, or the lamp has failed after first not performing at max brightness, this may suggest a failure of the actual LED component, necessitating a replacement of the full piece containing the LEDs.

SPECIFICATIONS

Wattage | 20 watts
Color Temperature | 2700 kelvin
Brightness | 2000 lumens
Adapter | Input 100-240VAC 50/60HZ
Output 24VDC 1A
